

SEARCH FOR EXTREME EATERS

Forget about herbivores, carnivores, and omnivores! Go in search of the animals that eat really bizarre things!

Most of these extreme eaters can be found nearby. Check them off as you find them. Can you find four in a row, four in a column, all four corners, or all of them?

(Hint: vore=one that eats, phagous=feeding or eating on, tropho=nourishment)

☐ hematophagous animals suck blood (mosquito, leech, tick)  (hee-muh-TOF-uh-gus)	☐  detritivores eat decomposing material (millipede, slug, snail, crayfish, pill bug) (dih-TRI-tih-vors)	☐ mycetophagous animals eat fungus (slug, fungus beetle, millipede)  (my-see-TOF-uh-gus)	☐ coprophagous animals eat droppings (dung beetle, rabbit)  (kuh-PROF-uh-gus)
☐ necrophytophagous animals eat dead plants (earthworm)  (neh-KRO-fy-TOF-uh-gus)	☐ geophagous animals eat mineral earth (deer, earthworm)  (jee-OFF-uh-gus)	☐ necrophagous animals eat decaying flesh (yellow jacket, vulture, burying beetle)  (neh-KROF-uh-gus)	☐  cannibals eat their own kind (cricket, mouse)
☐  self-cannibals eat parts of their own bodies, such as shed skins (toad, caterpillar)	☐ kleptoparasites steal food from other animals (spider, eagle)  (klep-tuh-PAIR-uh-sights)	☐  trophallactic animals eat regurgitated food (honeybee, ant, some birds) (trof-uh-LAK-tick)	☐ osteophagous animals eat bones (mouse, squirrel)  (OS-tee-OFF-uh-gus)
☐  sarcophagous animals eat flesh (blow fly) (sahr-KOF-uh-gus)	☐ pantophagous animals eat almost anything! (raccoon, opossum, skunk)  (pan-TOF-uh-gus)	☐  scolecophagous animals eat worms (robin, toad, gartersnake) (skol-ih-KOF-uh-gus)	☐ insectivores eat insects (spider, shrew, swallow, frog, dragonfly)
